Experience and wisdom in agriculture

Or more than 30 years and thanks to the commitment of more than 200 producers associated to our Cooperative, today Coprohníjar is a great reality.

Throughout all this time, we have put the experience and wisdom gathered from the countryside to good use in international markets. We have produced quality products of great recognition, always committed to being at the forefront, being pioneers in Integrated Production and promoters of new developments and above all aligning ourselves with the BIO concept.

Coprohníjar is located in the epicentre of intensive farming in Europe and specialises in the cultivation of organic fruit and vegetable produce.

We have 200 farmers who, with their effort and know-how, are the foundations of a solid project. We have facilities of more than 22,000 m² for conventional production and more than 30,000 m² for organic production.

We supply the national and international market with the effort and wisdom of our farmers, based on continuous improvement through R+D+i activities, personalised advice for our farmers, and the processing and marketing of top quality fruit and vegetable produce.

Coprohnijar produce is identified by their connotations of flavour and for being healthy products to be enjoyed by the most demanding palates.

Its unique climate and the characteristics of its soil, such as that of the Cabo de Gata-Níjar Natural Park, give them very special properties.
